## ALTO M.D. TOWERS STAIRWELL TOWER ASSEMBLY GUIDE <br> TO BS-EN 1004-2004

Using the 3T (Through the Trap) Assembly method

Alto Tower Systems Ltd Unit 6 Nash Road
Redditch
Worcestershire
B98 7AS
08451776644
www.alto-towers.co.uk
tower systems

1. These towers should be erected by at least 2 competent persons. Fit an adjustable foot assembly into a walk through base frame ensuring that the spring loaded pins engage in the holes provided (1A).

2. Fit two long braces diagonally between the bottom rungs of each frame. At this stage level the tower by adjusting the collars on the foot assemblies (see construction notes).

3. Fit the trap platform so that it is 1 m (2 full rung spacings) below the top rung of the tower with the trap against the frame higher up the stairs

## SAFETY NOTES

1. Before erecting check ground is level unobstructed and is suitable for the purpose. Also ensure area is clear of overhead obstructions, particularly power cables.
2. Check that the tower is stable before use.
3. Do not attempt to move a loaded tower.
4. Always climb the tower from the inside.
5. Do not overload the tower. Maximum platformloads $130 \mathrm{~kg}\left(2 \mathrm{kN} / \mathrm{m}^{2}\right)$. Maximum horizontal force at platform 30 kg .
6. Never remove components from a tower whilst it is erected. Dismantling must always be performed from the top. Failure to observe this rule will seriously reduce the strength and safety of the tower.
7. Do not use damaged components. Check all components before use and periodically lubricate all moving parts and wipe off surplus oil.
8. Secure the tower when left unattended.
9. Do not lean ladders against towers or use ladders on top of platforms.
10. At heights where components cannot be passed up or down by hand, a rope should be used for securing to components to aid safe raising and lowering.

11. Position the frame with the foot assembly on the higher location on the staircase making sure that the frame head fitting always points toward the middle of the tower (2B). Fit 2 short horizontal braces to vertical tubes of the frame just above lowest rung ensuring spring loaded pin faces outward (2A).

12. Fit the opposite ends of the braces to the other walkthrough frame with foot assembly fitted. The braces would normally attach just above the frame top rung. Ensure that the pegs on the frame head fittings point towards the middle of the tower.

13. Fit guardrail brace frame between the two frames with the hooks attached just above the top two rungs ensuring spring loaded pins face outward (see detail 2A). Repeat on the other side of the tower.

14. Fit the toeboards around the platform. Always remember to close the trapdoor immediately after climbing through.
15. Never work from, or build or dismantle the tower from, an unguarded platform.
16. If used externally beware of high winds. Tie in if necessary regardless of working height. Secure platforms against lifting.
17. Legislation now calls for inspection and recording of assembled towers. See HSE guidance note 10 (revision 4) for further details.

## CONSTRUCTION NOTES

1. Follow the erection manual to ensure that the correct erection procedure is used.
2. Ensure that sufficient equipment is available to construct the tower and is in working order.
3. Do not extend frame foot jacks more than is necessary to level the tower.
4. Use a Spirit level to check that the tower is upright.
5. The peg on the head fitting must always point inwards
6. Fit the first two horizontal braces to the vertical frame tube. This prevents the frame from falling over during erection and dismantling.
7. All diagonal braces are fitted as close as possible to the upright.
8. Observe all height limits and fit stabilisers to increase the safe working height to the tower.
Towers may also be tied to a suitable rigid structure using standard scaffolding tubes and fittings (see tying in). Fittings connected to the tower should not be over tightened as this could distort the aluminium tube.
9. Fit toeboards to all working platforms and ensure that all platforms are adequately guarded.
10. The dismantling sequence is the reverse order of the erection process.
11. For special or unusual applications contact your supplier for further technical data sheets and expert advice

| 5. Fit a 3 rung frame on to the lower walk through base frame by locating onto head fitting with peg engaging into hold provided. Repeat the process at the other end using a 2 rung guardrail frame. | 6. Now fit a temporary platform, guardrail brace frames \& ladder as shown in steps 6,7 \& 8 opposite. | 7. Using the temporary platform, fit a single rung guardrail frame onto the 3 rung frame by locating onto head fitting with peg engaging into hold provided. |
| :---: | :---: | :---: |
| 8. Remove the temporary platform \& guardrail brace frames. Fit a long brace diagonally between the top rungs of each walkthrough frames. | 9. Fit the clip-in-ladder, then the working platform on the 3rd rung down from the top. Using the 3T method, fit the guardrail brace frames as shown in step 6 opposite. Now, fit the toeboard as shown in step 9 opposite. |  |

## INSTRUCTIONS FOR BUILDING STAIRWELL TOWERS 2m/3m IN HEIGHT AND ABOVE

To build towers higher than $2 \mathrm{~m} / 3 \mathrm{~ms}$ follow the same procedures as above using 3 rung and 3 rung ladder frames to gain height and then top off using frames as shown in the schematic diagrams overleaf. However please note the following: Always work from a guardrailed platform while building. When building, fit a trap platform above you and, working through the trapdoor of this platform, install guardrails at 0.5 m and 1.0 m above platforms. It may be necessary to relocate platforms during assembly to achieve this.

## COMPONENT SCHEDULE

## ALTO STAIRWELL TOWERS WITH PLATFORM HEIGHTS FROM 1m/2m TO 5m/6m CONFORMING TO HD1004 WHERE RELEVANT <br> INTERNAL USE ONLY

| PLATFORM HEIGHT |  |  | 1.0/2.0m | 1.5/2.5m | 2.0/3.0m | 2.5/3.5m | 3.0/4.0m | 3.5/4.5m | 4.0/5.0m | 4.5/5.5m | 5.0/6.0 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| DESCRIPTION | CODE | WEIGHT ${ }_{\text {kg }}$ |  |  |  |  |  |  |  |  |  |

| TOTAL SELF WEIGHT OF TOWER KGs |  |  | 56 | 76 | 86 | 102 | 109 | 111 | 119 | 121 | 143 |
| MAXIMUM NUMBER OF WORKING LEVELS |  |  | 1 | 1 | 1 | 1 | 2 | 2 | 2 | 2 | 3 |

NOTES: A WORKING LEVEL ON A TOWER IS A PLATFORM WITH TOEBOARDS \& DOUBLE GUARDRAILS. THE MAXIMUM LOAD ON A 600 mm WIDE PLATFORM IS 2kN/m²WHICH IS:-
130 kgs EVENLY DISTRIBUTED ON A PLATFORM.
THE MAXIMUM LOAD ON A TOWER (INCLUDING THE SELF WEIGHT OF THE TOWER) SHOULD NOT EXCEED 750 kgs ( $3 / 4$ TONNE). THE MAXIMUM HORIZONTAL FORCE WHEN USING HAND TOOLS ETC. SHOULD
NOT EXCEED 30 kgs \& STABILISERS MUST BE FITTED
THE ABOVE SCHEDULE INCLUDES FOR: (i) 1 WORKING LEVEL WITH DOUBLE TOEBOARDS \& DOUBLE HANDRAILS AT 0.5 m .
(ii) A SINGLE TRAP PLATFORM \& HANDRAILS AT 0.5 m INSIDE \& OUT AS REST PLATFORMS EVERY 2 m .

TO CONVERT A REST PLATFORM TO A WORKING LEVEL: ADD 1 - TOEBOARD SET
